NEW QUESTION: 3

You have a Microsoft Exchange Server 2019 organization.
All mailboxes are assigned the same mobile device mailbox policy.
You run the command as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION: 4

Mr. Walt Street has observed that a Treasury note maturing in November of 2019 and paying a 3.375% coupon has a bid price of 105:25 and an ask price of 105:26. In this instance, what is the dealers' spread for every \$1,000 of par value?

- A. \$0.10000
- B. \$0.03125
- C. \$0.03375
- D. \$0.31250

Answer: D

Explanation:

For every \$1,000 of par value, the dealers' spread is \$0.31250. The prices of Treasury bonds and notes are quoted in 32nds of a dollar per \$100 of par value. Therefore, the bid price is \$105 $25/32$, or \$105.78125, per \$100 of par, and the ask price is \$105 $26/32$, or \$105.8125 per \$100 of par.

The difference between the two is the dealers' spread per \$100 of par value, or \$0.03125. The question

asks for the dealers' spread for every \$1,000 of par value, so this must be multiplied by 10:

$$\begin{aligned} & \$0.03125 \times 10 \\ & = \$0.31250. \end{aligned}$$
